

Cooler end cover, corroded

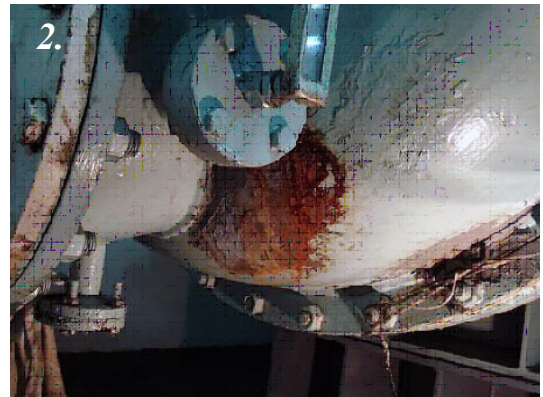

Application:	Repair of cooler end cover, corroded
Place:	Rotterdam
Date:	June 2009
Job and report done by:	Repair Management Nederland B.V.
Wencon products used:	UW Cream, Perago Disc, Cleaner, appl. tools

1.
Emergency repair of cooler end cover from the outside, to stop the leakage.

2. & 3.
Surface cleaned with Perago Disc and Wencon cleaner to achieve a rough surface, for a good adhesion of the Wencon material.
Wencon UW Cream was applied, due to dripping water and adhesion on a wet surface was needed.

A small spot slowly dripping was discovered after ended application. Presumably caused by pressure on the end cover from the inside. Wencon recommended to add some extra layers of Wencon UW Cream on top, to stop the leakage completely.
